OFFICE SPACE FOR LEASE / RENT

Commerical office space for Lease / Rent in Mahape, Navi Mumbai

- 5900 sq ft. area
- Available at reasonable rent
- Ready possession and it's fully furnished for running 125 seats call centre
- Very good location
- Four car park and ample space for guest parking too
- Good view
- HDFC bank and DNS Bank in the building
- Next to a five star hotel
- 5 Min walking distance from Ghansoli Railway Station.
- Bus stop is also right in front of property
- One minute away from millennium park

Issue of concern – Action needed for road safety

Rajesh Tiwari
Publisher
rt@iccsr.org

CSR initiatives can play a major role in ensuring road safety and awareness – right from putting on helmets to seatbelts.

As traffic speed and density increase on Indian roads every day, a major concern and challenge for policy makers is how to contain the growing number of accidents and the resultant loss of life and livelihood. Nearly 5 lakh road accidents take place in the country every year, in which close to 1.5 lakh lives are lost.

India is a signatory to the Brasilia Declaration that mandates halving road accident fatalities by 2020, and the government is very serious about meeting this commitment. So while the Ministry of Road Transport and Highways pushes ahead with its efforts to build world class, efficient and eco-friendly road infrastructure in the country, it is keeping road safety at the core of almost every plan it makes and every action that it takes.

CSR initiatives can play a major role in ensuring road safety and awareness – right from putting on helmets to seatbelts.

Road accidents can be caused by a number of factors that include traffic violations like excess speed, not using seat belts, child seats and helmets, drunken driving, or by poorly designed or insufficiently maintained road infrastructure and vehicles that are old, not well maintained or lack safety features. Containing accidents therefore requires appropriate regulatory framework, enforcement mechanism and other related action that can address these issues in a multi-pronged manner. WHO, in its Global Plan for the Decade of Action for Road Safety 2011-2020, has recommended that countries should implement road safety activities according to “five pillars” which include Road Safety Management through institutions and legislative framework; Building Safer Roads through proper design, engineering and traffic calming measures; promoting Safer Vehicles; educating road users for Safer Road Usage and through efficient Post-crash Response.

Based on this recommendation the Ministry of Road Transport and Highways has been making concerted efforts to promote road safety by overhauling the institutional and statutory framework, employing engineering solutions to build safer roads, laying down standards for safer vehicles, building an environment for better enforcement of traffic regulations and improving emergency care, over the past two years. A National Road Safety Policy has been put in place that recommends adopting a multi-pronged strategy to tackle the problem based on the 4 E's viz Education, Engineering (both of roads and vehicles) Enforcement and Emergency Care.

Road engineering has emerged as another priority area. Road safety has been made an integral part of road designing and safety audits are being taken up for selected stretches of National Highways. As short-term measures, rumble strips, reflective stickers at junctions, fixing signboard/ cautionary board, providing signage and speed restrictions are being used. As long-term measures construction of vehicular under-pass, by-pass, flyover, crash barriers and slope stabilization techniques are being taken up. The threshold for 4-laning of national highways has been reduced from 15000 Passenger Car Units (PCUs) to 10,000 PCUs. About 52,000 KM of state highways have been identified for conversion to national highways – the target is to raise the total length of national highways from 96,000 Km three years back to 2,00,000 KM. With a present length of 1,74,000 KM of national highways, we are now close to the target.

Godrej Appliances And The Mumbai Dabbawala Association Take A Step Towards #Unhungryindia

India is home to 194.6 million undernourished people and one third of the world's chronically malnourished children. Approximately 38.7 percent of children under the age of 5 are malnourished in India.

To help fight hunger, Mumbai's acclaimed Dabbawalas have been running the 'Rotibank' initiative since 2015 to prevent wastage of food and feed the underprivileged. As part of the initiative, leftover food from households, occasions like birthday parties and weddings are collected by the dabbawalas to be distributed to the underprivileged living on the streets. Nearly 400 dabbawalas are dedicatedly working round the clock to pull off this non-profit initiative in addition to their routine work.

Godrej Appliances, one of the leading brands in India's home appliances segment has joined hands with the Mumbai Dabbawala Association to extend its support to their Rotibank initiative as a part of #UnHungryIndia campaign.

Godrej Appliances is supporting this initiative through customised cycles fitted with Chotukool – a one-of-its-kind personal food and beverage cooler. Godrej ChotuKool is compact, light weight and can retain cooling for up to 3-4 hours even without electricity and remains compatible with portable inverters, car chargers and even external batteries, which makes it a perfect solution to the food storage problem being faced by the dabbawalas.

These customised cycles will help dabbawalas to store food on the go and also preserve it overnight thereby enabling and empowering them to efficiently run this unique Rotibank initiative and scale

Godrej Appliances presenting customised cycles fitted with Chotukool to Mumbai Dabbawala Association

it up further. Commenting on the occasion, Kamal Nandi, Business Head & EVP, Godrej Appliances, said, "Mumbai Dabbawalas are doing tremendous work in feeding the underprivileged. The tradition of giving back to society has been deeply rooted in the culture of Godrej. Godrej is a brand that has been synonymous with trust, reliability and quality. It is a brand with a conscience which understands its responsibility towards its customers, its stakeholders and the larger society and delivers it through everything it does. This is our small contribution towards a noble cause. Food is such a basic essential which we take for granted. As a company that deals in appliances and promises brighter living, we are glad to be a part of such social initiatives which can contribute towards reducing

hunger amongst the larger underprivileged sections of society."

Subhash Talekar, General Secretary and Spokesperson, Mumbai Dabbawala Association, said, "The Rotibank initiative is aimed at providing food to the underprivileged people living on the streets of Mumbai who often find it difficult to afford even two square meals a day. We were facing a major challenge in delivering the food before it became stale. Additionally, we were not able to carry large quantities of food due to storage and space related constraints. Hence, we are grateful to Godrej Appliances for their support through Chotukool. It would make it easier for us to store food for longer and also reach far-flung places. We now have the assurance that the food we are delivering is healthy."

JBGVS Gives Over 600 Animals In Wardha In Five Years, Including Trial Of Gaolao Cow

Provides facilities for water supply to Central Breeding Institute and new Fodder Cafeteria

inaugural function of Gaolao cow exhibition

Cattle have been an integral part of India's agricultural landscape for ages. As a part of integrated rural development program, Jankidevi Bajaj Gram Vikas Sanstha (JBGVS) has been distributing animals under its Kamdhenu Gopalan Project to poor farmers in selected

districts of Maharashtra and Rajasthan for the past 10 years to provide a source of supplementary income. Wardha district has been a case in point with over 600 animals – cows (including Gaolao breed), buffaloes and goats – distributed in 20 villages in five years to promote animal husbandry.

Role in animal husbandry

The role of JBGVS in animal husbandry in Wardha is significant. Till now it has distributed 20 Gaolao cows (that have multiplied to 50 after breeding), 100 hybrid cows, 40 buffaloes and 90 sets of goats (five animals each). Up to 50% of the cost in case of cows and buffaloes and 90% in case of goats is borne by JBGVS, while the rest is borne by the beneficiary. Goats are given to below poverty line/economically backward families. Across all districts where JBGVS is present, the average annual income of beneficiaries from livestock is as follows: hybrid cow – Rs 65-70,000, Gaolao cow (Wardha) – Rs 25-30,000, buffalo – Rs 50-55,000 and set of goats – Rs one lakh. Even in the harsh climate of Wardha district, Kiran Chaudhari of Dawlapur has been earning Rs 50,000 per annum from the hybrid cow provided by JBGVS. Another beneficiary – Mahadevrao Kinnewar – from Aloda, who was provided a Gaolao cow in 2014 as a part of the new experiment by JBGVS, has been earning Rs 30,000 per annum. Some cattle provided by JBGVS have also been a part of

2017 WHAT NEXT FOR GREEN FINANCE?

LAST YEAR WAS THE "BEST YEAR EVER" FOR GREEN FINANCE, BUT 2017 WILL BE ABOUT TURNING NATIONAL CLIMATE GOALS INTO INVESTMENT PIPELINES. UNEP'S NICK ROBINS OUTLINES THREE PRACTICAL STEPS TO SHIFT PRIVATE CAPITAL TO WHERE IT CAN BENEFIT ALL OF US.

The year 2016 is on course to be not just the hottest on record, but also probably the dirtiest and most hazardous too. "The climate has broken records in 2016" says World Meteorological Organization chief Petteri Taalas. Smog once again returned to haunt many of the world's cities notably in China, Europe and India - with the primary cause the same as climate change:

the burning of fossil fuels. Worldwide, around 18,000 people now die every day as a result of air pollution. Some 26 million people are also forced into poverty each year by the impact of natural disasters, with climate shocks reversing hard-won development gains.

The year of green finance

Yet before you get too downhearted, we

need to celebrate the fact that 2016 was also the best year ever for green finance. Simply put, green finance covers the financing of investments that generate environmental benefits as part of the broader strategy to achieve inclusive, resilient and sustainable development. In 2016, G20 heads of state for the first time recognised the need to 'scale up green finance' setting out a series of steps to make this happen. Key countries

Government Of Maharashtra And Tata Trusts To Harness Potential Of Bamboo

R Venkataramanan, Managing Trustee, Tata Trusts; Sudhir Mugantiwar, Cabinet Minister of Finance, Planning, and Forest Departments, Government of Maharashtra; Ratan Tata, Chairman, Tata Trusts; and Hansraj Gangaram Ahir, Minister of State – Home Affairs, Government of Maharashtra launch the Chandrapur Coffee Table Book

The Government of Maharashtra and Tata Trusts have strengthened the work they are doing in Maharashtra by signing a Memorandum of Understanding to develop the Bamboo Research and Training Center (BRTC) in order to establish a one-of-its-kind Center of Excellence for Bamboo.

The event was attended by Sudhir Mugantiwar, Minister of Finance, Planning, and Forest Departments, Government of Maharashtra; Hansraj Gangaram Ahir,

Minister of State for Home Affairs, Ratan Tata, Chairman, Tata Trusts; R. Venkataramanan, Managing Trustee, Tata Trusts; V Giriraj, Principal Secretary, Rural Development, Government of Maharashtra; and other eminent dignitaries.

An exciting new dashboard that will assist data driven decision-making was a key highlight of the event. They launched the Chandrapur data dashboard as part of the Tata Trusts microplanning initiative known as 'DELTA' – Data, Evaluation, Learning,

Technology and Advancement, under the Data Driven Governance programme.

A slew of announcements and launches were made at this mega event including the launch of 'Bamboo Board Policy Recommendations' by Bamboo Board, launch of the 'Chandrapur Coffee Table Book', distribution of 'Baby Healthcare Kits' and a walk-through of the BRTC.

Speaking on the occasion, Mugantiwar, said, "Charity is a work of virtue but building capacity providing the opportunity for people to be self-sustained by way of philanthropic programmes is an act of greater virtue. Tata Trusts has provided assistance for creating the dashboard of statistical data which will help in implementing a micro finance model in the district. Chandrapur will become the next model village in the coming 2 years with support from Mr. Tata and an organization like Tata Trusts. We thank Tata Trusts in providing their expertise and technical & sectoral knowledge in making these projects successful."

Speaking at the event, Tata, said, "I am happy to be here in Chandrapur today but more importantly I am thankful for the opportunity that Tata Trusts has got to make a difference in the state. Tata Trusts is very pleased to partner with the Government of Maharashtra to work on 'Bamboo Research and Training Centre (BRTC)', create a Centre of Excellence (CoE) for Bamboo, and for the data driven governance. Prime

10 Storylines That Shaped The Urban Debate In 2016

BY CHRISTOPHER SWOPE, GREGORY SCRUGGS AND CAREY BIRON

From the perspective of city leaders and urban activists around the world, it's safe to say 2016 was a year of contrasts. The year saw the Olympics of urbanism take place in Quito, Ecuador, where the United Nations held Habitat III, its once-every-20-years summit on cities. We also saw a big-city backlash in elections in the United States and United Kingdom, a rural revolt whose repercussions are still unknown.

There were many other storylines in 2016, as well. We covered them from city halls and neighborhoods around the world, where some of the world's most exciting policy innovations are happening. And we covered many more on the road to Quito, which wound through dozens of gatherings on five continents. Here are 10 global urban narratives that shaped our reporting in 2016.

01 Cities top the international agenda

Cities received the full diplomatic treatment this year. The action peaked in October at the Habitat III conference,

The U. N.'s Habitat III summit on cities took place in Quito, Ecuador in October. (UN-Habitat)

attended by 30,000 people from 167 countries. You can find all of Citiscopes coverage from Quito here.

In the run-up to Habitat III, questions of how to plan, build and manage "sustainable" cities were the focus of four months of political negotiations by nearly all members of the United Nations. The result of those talks, the 24-page New Urban Agenda, ultimately was approved and adopted by nearly every country on earth. It will offer guidance over the next two decades.

The Habitat III process saw a global debate on urban issues

that some say was unprecedented in its outreach to stakeholders and experts. While many of the most progressive views to come out of those discussions ultimately were jettisoned from the New Urban Agenda, they continue to animate advocates. Other urban observers purposefully stood outside of the official Habitat III process but nonetheless used the global cities discussion to emphasize their own urban solutions.

02 Implementing global frameworks locally

Habitat III was the capstone to more than two years of work to push cities to the center of the global development discussion. In 2015, the urban issue had received unprecedented recognition in two

Much of the job of implementing the Sustainable Development Goals will happen in cities. (De Visu/Shutterstock)

Tapping The Sun For Safer Healthcare

A new device that can sterilise surgical instruments using just sunlight and water could help to prevent infections and save lives in rural areas and disaster-struck zones. BY **FENG ZENGKUN**

RSO Shift partner Dentists for Africa delivers medical services in the field. In areas with no electrical access or clean water, it can be challenging to sterilise medical equipment properly

Visit parts of Africa and it might seem as though the health-care advances of the past few decades did not happen at all. Stymied by a lack of clean water and reliable electricity, doctors have struggled to carry out safe and hygienic surgeries in rural villages as well as in disaster-struck areas

across the world. Philipp Odernheimer and Raphael Schönweitz, two German engineers, learned of this harsh reality when they explored parts of rural Africa during their university years and spoke to a retired paediatrician who was providing medical care and surgeries to children in the remote parts of the continent.

Shaken by their experiences, they teamed up with Martin Reh, a business economist, to form RSO Shift, a company dedicated to inventing durable and energy self-sufficient medical devices for use in developing regions. The United Nations has estimated that about 1.4 billion people globally do not have access to electricity, and about 670 million people go without clean water.

Now, the three co-founders have created the LifeShift Steriliser, a portable machine that can sterilise surgical instruments such as scalpels, tweezers, clamps and needles using just sunlight and water from any source, even potentially contaminated ones such as rivers, lakes and wells.

The steriliser's rucksack-like carrier system also means that people can carry it across areas with difficult terrain, such as areas without paved roads or where the paths have been damaged. "This makes the device an especially practical solution for use in natural disaster zones," says Reh.

Ensuring safe surgeries everywhere

The steriliser's journey from idea to proto-

A Year Of Turmoil - But Optimism Should Rule For 2017

It may be difficult to feel optimistic about the year ahead given how disturbing 2016 was, but CSR Asia Malaysia executive director Rikke Netterstrom outlines a few reasons why 2017 will be better.

BY RIKKE NETTERSTROM

Window air-conditioning units. A recent global agreement on a phasedown path for Hydrofluorocarbons (HFCs), the Paris climate agreement and a global deal to reduce the aviation sector's carbon emissions are signs of growing momentum on climate change.

There is no doubt that 2016 will be remembered as a year of disruption and change. Many sad and disturbing events have dominated the news, and it can be difficult to look forward to the new year with rose-tinted glasses.

But we sustainability people are eternal optimists. Without our fundamental belief that we can make a difference, we would have never chosen to spend our days tackling some of the biggest challenges of our time. We would not believe that human rights abuses in factories and fields could be

prevented and remedied; we would shake our heads at the idea that deforestation is not an unstoppable force; and we would not travel the world seeking to convince board rooms that corruption is not the only way to do business.

Thankfully, 2016 was indeed a year of much accomplishment. Where much of the political sphere seemed dire, partnerships between civil society and business once again proved that change can be made through dialogue, commitment and a bit of bravery.

A hot year – but cooling down?

While no one believes we have halted climate change, 2016 brought some good news: Even as climatologists announced that 2016 was projected to be among the warmest in history, research from the Global Carbon Project showed almost no increase in annual emissions of carbon dioxide between 2014 and 2016.

Around same time, the secretariat of the United Nations Framework Convention on Climate Change confirmed that enough countries had ratified the Paris Agreement to satisfy the criteria required to trigger it

The Top 5 Water Stories In 2016

Bigeye soldierfish underneath coral in the Papahānaumokuākea Marine National Monument. It has been a good year for marine parks but less so for coral reefs. Image: NOAA's National Ocean Service

Hydropower remains contentious in Southeast Asia and water shortages raised tensions in India this year. There was progress on cleaning up the oceans and the conservation of marine habitats, but warming seas took a toll of coral reefs.

Water is an irreplaceable component in the fight against climate change but it is also its biggest victim. The World Economic Forum named water the number one threat in 2015 and it was also ranked a top risk in

2016. Over the last 12 months, the world was given a sneak preview of the global water wars scientists have predicted for the century ahead, and tensions surrounding dams and the control of water within drought situations were flashpoints for conflict. Companies can expect water use to hit their bottom lines harder and prices of electricity are likely to go up as hydropower comes under threat.

But there were also commendable efforts to clean up the oceans by individuals, and countries agreed to create the world's

largest marine park in Antarctica. Here are the top 5 water stories of this year.

1 A hotter, drier, more volatile world

Dubbed the “petroleum of the next century”, water is expected to be a geopolitical tinderbox in a hotter, climate-changed world. Droughts were particularly intense in India and Southeast Asia this year due to the El Nino weather phenomenon.

India, which already suffers water shortages that cause tension between its many states, this year saw violent protests in Bangalore over a Supreme Court order to divert water to neighbouring state Tamil Nadu. Government troops were also deployed to secure a canal bringing water to New Delhi after saboteurs caused days of shortage in the capital.

India has been named one of the world's flashpoints for climate-related violence in the world, alongside Colombia and Nigeria. According to Kerala State Electricity Board chairman and managing director, K Elangovan, there has been a 43 per cent rainfall deficit in India's southwest and northeast regions. Water levels in India's 91 reservoirs are at their lowest in a decade. The dry spell has been so bad the Bombay High Court has even lambasted the hallowed Indian Premier League cricket tournament as a “criminal waste of water”.

Here's Why 2017 Will Be The Year Of The Circular Economy Revolution

The entrepreneurs, innovators and investors will commercialize the technologies and businesses build the circular economy

BY BRIDGET CROKE AND ROB KAPLAN

The circular economy has captured the imagination of brands, cities and innovators. Will 2017 be the year when the concept evolves from aspiration to profitable action? Here are four reasons why, from our view as circular economy investors, we believe this year will mark a shift from idea to action:

1 Focus on local government

If there is one safe bet with the new administration, it is that leadership on circular economy will not be coming out of Washington. Instead, we expect an increasing reliance on the leadership of state and local governments as the feds take a back seat.

This shift means an increasing focus on the day-to-day realities of costs associated with waste management and profits possible by shifting to a circular economy. This won't just come from the usual suspects. Communities such as Memphis, Tennes-

see; Waterbury, Connecticut; and Portage County, Ohio; have chosen to invest millions of dollars in their recycling infrastructure in order to reduce costs. Phoenix

and New York City have stated circular economy language in their goals and are implementing on a range of programs to get them there.

Further, according to President-elect Trump, "Infrastructure investment strengthens our economic platform, makes America more competitive, creates millions of jobs, increases wages for American work-

ers and reduces the costs of goods and services for American consumers." This could be an important opportunity to build the infrastructure required to advance circular economy principles at scale, enabling real, shovel-ready projects across the country to get built.

We have received over 300 proposals for such projects and are seeing models such as Lakeshore Recycling in Chicago (PDF) and Eureka Recycling in Minnesota's Twin Cities creating high-value local jobs and robust business models that make these infrastructure projects profitable.

2 Recycling is the feedstock of U.S. manufacturing growth

Local manufacturing creates stable, well-paying jobs – jobs that are disappearing in North America. The manufacturing employment opportunities of the future will look different from those of the past. One of the most exciting trends we see across our

How To Ensure Children Everywhere Enjoy The 'Urban Advantage'

Through the SDGs and the New Urban Agenda, countries have committed to ending children's unequal access to basic services. Yet delivering on this pledge will require a deep shift in how we plan and govern cities. BY **SAMANTHA COCCO-KLEIN, CITISCOPE**

Over a billion children today live in cities and towns, a number set to rise as the world continues to urbanize. Increasingly, children will be born, grow, learn and play in cities, and the quality of their urban childhoods will determine their futures – and ours.

For too many of these children, however, cities are a place of inequality. In Latin American cities, for instance, 1 in 3 children grows up in a precarious household. In New York City, a similar proportion lives below the poverty line. They do not enjoy the “urban advantage” that comes with access to health, education and recreation. They are more likely to live in neighbourhoods cut off from city services and infrastructure, areas marked by insecurity and vulnerability to natural hazards.

At the recent Habitat III conference on sustainable urbanisation, countries agreed to the principle of equal rights and opportunities for people of all ages – and committed to ending children's unequal access to basic services.

The New Urban Agenda, the 20-year strategy adopted at Habitat III, echoes the

Children play in heaps of dirt and discarded bricks in Gurgaon Haryana, India. As cities become bigger, will they offer space for children to live to their fullest potential?

pledge made by world leaders when they agreed on the Sustainable Development Goals (SDGs) in 2015.

The urban-focused SDG 11 calls for cities to be safe and inclusive by 2030, and includes special attention to child-friendly transit and safe spaces. In short, countries have promised a future in which all children enjoy the urban advantage. Fulfilling this promise, however, requires a deep shift in how we plan and govern cities. It also requires a rethink on how we approach children's urban issues. A new report from Equity for Children highlights how a child-inclusive approach can guide implementation of the New Urban Agenda and the SDGs.

Reframing urban agendas

Too often, cities are planned and managed as if children and their families, along with the elderly and the disabled, do not exist. In New York City, for example, a new bike-share system has been rolled out – but without child seats or child-sized bikes.

Even if such facilities were made available, the majority of the city's bike lanes are unprotected and not safe for children to use. Thus, the network is largely unusable for working parents who need to take children to school or day care, or for older children traveling on their own.

By 2030, children under 18 will make up the majority of urban residents around the world. Reaching an understanding of the city as home to a diverse and young population with real needs won't happen without reframing – or rethinking – urban agendas.

To do this, we need to consider how critical urban issues – from infrastructure to the economy, transport to sustainability – interact with children's well-being. An example is early-childhood care, widely seen as a critical investment in children's development.

As noted by Florencia Lopez Boo, a senior economist with the Inter-American

Sustainability In Shanghai Tower

Lauded the most beautiful skyscraper of 2015, the Shanghai Tower is an icon of China's drive to green its built environment. The tower's energy-efficient operations are propped up through its use of Danfoss technology.

Buildings are a cornerstone of human civilisation – people's daily activities inevitably revolve around these structures and they are an inalienable part of urban life.

However, buildings are also one of the greatest contributors to climate change, with

their construction, operation and maintenance consuming large amounts of energy and causing significant environmental impact. A study conducted by the United Nations Environment Programme (UNEP) shows that buildings are responsible for around 30 to 40 per cent of global energy use,

age, consume a third of total resources used, and generate 40 per cent of solid waste.

For that reason, recent years have seen increased interest in the concept of green buildings, which involves building and operating buildings in an efficient and sustainable way to minimise environmental impact.

The UNEP notes that the building industry has the greatest potential for reductions in greenhouse gas emissions with current technology and at minimal cost.

Furthermore, green buildings also offer other significant social and economic benefits – for example, studies have found that workers in sustainable buildings enjoy improvements to both their health and productivity.

Pursuing green development

Presently, China is one of the countries most proactively pursuing green building projects globally.

Since 2008, total green building space in the country has grown 154 times to a total of about 320 million square metres, causing China to overtake the US in terms

BNHS Launches Climate Change Programme

To begin with study of Pheasants & Finches in Central Himalayas

Khalij Pheasant (by Rohan Bhagat)

The scenic Himalayas hold a rich natural heritage with diverse flora and fauna enhancing the beauty of this region. Bombay Natural History Society (BNHS) has launched Climate Change Programme under which the first study funded by Oracle and facilitated by CAF-India aims to assess the status, distribution and conservation of pheasants and finches in Central Himalayas. This study focuses on their conservation in the context of climate change with the help of community participation.

The Indian subcontinent is home to nearly 50 species of Pheasants and 62 species of Finches, with several species listed in Globally Threatened category by IUCN. Both these groups are distributed across the Himalayas. Shrinking habitats combined with several biotic factors, along with trapping and poaching pressures in many areas has pushed several of them to near extinction. Climate change can highly influence vertical and horizontal distribution of these groups making boundaries of protected areas fuzzy. The species that
